- Located in New Waverly, Texas
- Home of the Fighting Bulldogs
- Serves 901 students

SERVICES PROVIDED:

- Replaced 307 tons of A/C equipment
- Raptor Technology ID Scanning system, security camera upgrades, fire system improvements
- Automated A/C controls, district-wide lighting upgrade, and cafeteria refrigeration improvements

Nestled north of Houston, New Waverly ISD serves a total of 901 students and strives to make their students' daily learning experience productive and enjoyable. In order to fulfill their mission, the district recently entered into an Energy Performance Contract developed and offered by the Way Companies.

Way's program will replace 307 tons of A/C equipment with associated automated system controls, perform a complete district wide lighting upgrade and retrofit and provide energy management planning services.

Principal Kris Drane was thrilled Way was able to improve their campuses and upgrade protection. "The added security coverage will give us the peace of mind that our students are safe every day," Drane said.

The Energy Performance Program will be completely self-funded with no up-front cash necessary. New Waverly's financial burden was additionally reduced thanks to the $2 million in Qualified Zone Academy Bonds (QZAB) from the federal government that helped financed the installation. QZAB's are federally funded loans for schools and districts seeking to renovate or improve their facilities. Additionally, the QZAB funds provided the opportunity for the District to acquire new school buses, repave parking lots, refinish gym bleachers and repair gym floors. The total projected savings for New Waverly ISD are set to exceed $2.5 million over the course the program.
